PREFACE	4
INTRODUCTION	6
<u>PART ONE</u>	
<u>MECHANICAL PHENOMENA DURING BUILDING DEMOLITION CAUSED BY EARTHQUAKE</u>	9
1. Clarifications to experimental studies on the constructional technical safety from earthquakes	9
2. Deformations and Destructions	13
3. Selective Factors	26
<u>PART TWO</u>	
<u>SOIL'S IMPACT ON THE STRUCTURES' RESISTANCE TO EARTHQUAKE</u>	31
4. Preliminary Notes	32
5. Soils	33
<u>PART THREE</u>	
<u>USE OF THE SOIL STUDY FOR SEISMOLOGICAL PURPOSES</u>	38
7. Complementary Seismic Accelerations	39
8. Soil Danger Maps	43
9. Seismic Action Maps	43
10. Standardization of the Complementary Means	44
<u>PART FOUR</u>	
<u>BUILDING IN SEISMIC AREAS</u>	46
10. Purposes	47
11. Essential issues on anti-seismic constructing elements	49
12. Building Materials and Fires	54
<u>PART FIVE</u>	
<u>EVALUATION OF STANDARD WAYS OF BUILDING</u>	56
13. Solid Stone Construction	57
14. Massif Concrete Structure	62
15. Frame-Built Structures	62

16. Reinforced Concrete Framework	66
17. Steel Frame-Built Structures	69
18. Skyscrapers and Other Tall- Slender Structures	70
19. General Guidelines for the Structure Resistance to Earthquakes	76
20. Engineering Constructions	77
<u>PART SIX</u>	
<u>SETTLEMENT PLANNING IN SEISMIC AREAS</u>	78
21. Supervision of Construction by the Authorities	79
22. Static Computing in Seismic Areas	80
23. Tall buildings and settlements planning	81
<u>PART SEVEN</u>	
<u>SEISMIC DAMAGES REMOVING/ELIMINATION/</u>	83
24. First Aid after an Earthquake	83
25. Constructional- technical measures	84
